

MyQ Solution is designed to be the best solution *for Ricoh MFDs*

MyQ, the Prague-based developer of award-winning managed print solutions, is pleased to announce that its MyQ Solution embedded terminal for multi-functional devices (MFDs) is fully compatible with Ricoh SDK-J and SmartSDK devices.

“Our partnership with Ricoh places us in the great position to offer MyQ Solution to new Ricoh customers and to assure existing customers that their MyQ Solution will be compatible whenever they upgrade their Ricoh MFDs to take advantage of new functionalities,” said Martin Janus, CEO of MyQ. “Forward-thinking companies will be able to combine new Ricoh device features with the personalized user interface, one-click OCR, and remote capabilities that they have come to expect from MyQ.”

“Our development relationship with Ricoh is a real win-win,” stated Petr Hacmac, CTO of MyQ. “It enables us to fine-tune our solution so that it precisely meets the technical capabilities of Ricoh MFDs, while also meeting customers’ needs for a comprehensive solution for their document-handling requirements, including those mandated by GDPR.”

MyQ Solution is the preferred solution for Ricoh in Czech and Slovak markets, and in the Spanish market is an integral part of the Ricoh solutions portfolio.

“As an independent developer of MFD solutions, we have had to earn our position within the Ricoh portfolio of offered solutions – and we have strengthened this relationship over the years,” added Mr. Janus. “We are there because Ricoh knows the quality of our products and customers are pleased with the services we offer.”

MyQ Solution is designed to enhance the user MFD experience at every step, enhancing – with workflow-programmable, one-touch actions – the full range of operations such as document printing, scanning, copying and data transfer. Personalization functionalities in the MyQ embedded terminal enable admins and users to easily customize the terminal according to the organization, its people and their job functions. MyQ pull printing provides users with secure and effective document handling processes, equips them to send pages to a secure printer network, log in to print them from any currently available MFD, and to do this even via mobile devices.
